# Chapter 1

## Getting Started

The Magellan™ 3200VSi On-Counter Vertical Presentation Scanner is designed for small counter retail checkout environments where there is a relatively high number of transactions with a fairly small number of items per transaction. The scanner has a reduced footprint, allowing more room for item merchandising of high margin impulse items clustered around the P.O.S.

### About This Manual

This manual provides advanced user information, including connection, programming, product and cable specifications, and other useful references. For additional information, such as installation, maintenance, troubleshooting and warranty information, see the Quick Reference Guide (QRG). Copies of other publications for this product are downloadable free of charge from the website listed on the back cover of this manual.

On leaving the factory, units are programmed for the most common terminal and communications settings. If you need to change these settings, custom programming can be accomplished by scanning the bar codes in this guide.

Bold text and a yellow-highlighted background indicates the most common default setting for a feature/option.

### Manual Conventions

The symbols listed below are used in this manual to notify the reader of key issues or procedures that must be observed when using the scanner:

#### NOTE

**Notes contain information necessary for properly diagnosing, repairing and operating the scanner.**

#### CAUTION

**The CAUTION symbol advises you of actions that could damage equipment or property.**

## Connecting the Scanner

The scanner kit you ordered to match your interface should provide a compatible cable for your installation. Alternatively, if your scanner receives Power Off the Terminal (POT) it might be possible to connect using a cable from a previously existing installation (except for USB). If you wish to connect using an existing cable, but cannot use POT, a short adapter cable is available. Check with your technical support representative about compatibility before connecting. Use the appropriate instructions below when you're ready to connect the scanner to the terminal, PC or other host device.

Upon completing the connection via the appropriate interface instructions below, proceed to the [Interface Related Features](#) section of this manual and scan the bar code to select the correct interface type.

**RS-232 Serial Connection** — Turn off power to the terminal/PC and connect the scanner to the terminal/PC serial port via the RS-232 cable as shown in [Figure 1a](#). If the terminal will not support POT (Power Off the Terminal) to supply scanner power, use the approved power supply (AC Adapter) as shown in [Figure 1b](#). Plug the AC Adapter barrel connector into the socket on the RS-232 cable connector and the AC Adapter plug into a standard power outlet.

**Figure 1. Connecting the Scanner**

**USB Connection** — Connect the scanner to a USB port on the terminal/PC using the correct USB cable for the interface type you ordered. Reference [Figure 1](#).

### NOTE

USB installations may require a power connection via an approved A/C Adapter as shown in [Figure 1b](#) or [Figure 1c](#). For example, this would be the case if the scanner is connected along with a number of other devices to a non-powered USB hub.

**IBM Connection** — Connect the scanner to the IBM port on the terminal/PC using the correct IBM cable. Reference [Figure 1](#).

**Keyboard Wedge Connection** — Before connection, turn off power to the terminal/PC. The Keyboard Wedge cable has a 'Y' connection from the scanner. Connect the female to the male end from the keyboard and the remaining end at the keyboard port at the terminal/PC. Reference Figure 1a.

**Figure 2. Labeling and Nomenclature**

1	Back Cover	8	P/N Label
2	Scanner Push Button	9	USB/SD Cover
3	Camera Push Button	10	USB Service Port — On Screen Programming Tool
4	Scan Window	11	microSD Card Slot — Upgrade, imaging, statistics data
5	Cable Connector Cover	12	Host (blue) Port — POS terminal, label data, application host download, host commands to scanner
6	Checkpoint EAS Wire Cavity Electrical Article Surveillance Antenna Connection	13	Auxiliary (yellow) Port for RS-232 handheld scanner, EAS Interlock, PIR data, etc.
7	Serial Number/Regulatory Label		

## Error Codes

If an error is detected, the scanner will sound a long low tone (for three seconds) and flash its LED, indicating a failure. When this occurs, press the Scanner Pushbutton to hear the error code. If it is configured to do so, the scanner will sound a series of beeps corresponding to the error code and/or flash its LED simultaneous to the beeps. The table below describes what these codes mean and what action should be taken for each.

NUMBER OF LED FLASHES/ BEEPS	ERROR	CORRECTIVE ACTION
1	Configuration	Contact Helpdesk for assistance
2	Interface PCB	
6	Main PCB	
10	Button Error	
12	Imager Module	
13	Software ID Failure	
14	Software Fatal Fault	

## Mount Installation

Options for mounting the scanner to a wall or countertop include an L-Bracket or stackable Risers (straight or tilted). [Figure 3](#) shows the scanner being seated in an L-Bracket. [Figure 4](#) demonstrates the use of stackable Risers.

**NOTE**

**Stackable Risers also require use of the L-Bracket in order to securely seat the scanner in the topmost riser.**

**Figure 3. L-Bracket Mount**

1. Scanner
2. L-Bracket
3. Wall Mounting Screws
4. Countertop Mounting Screws
5. Move the scanner toward the bracket in a diagonal motion to seat it.

**Figure 4. Using the Risers**

## Wall Mount

Attach the L-Bracket to the wall, securing it in the desired position with two screws through the two holes in the back face of the L-Bracket as shown in [Figure 3](#). Recommendation: Use two Pan Head (8.2mm or 5/16" maximum head diameter) #8 screw with a thread profile that suits the mounting surface material in the wall.

## Countertop Mount

If using the L-Bracket alone for countertop installation, secure the bracket in place using two screws through the bottom face of the bracket (see [Figure 3](#)). If risers are used, secure a riser to the countertop by attaching two screws through its screw holes. Recommendation: Use two Pan Head (8.2mm or 5/16" maximum head diameter) #8 screw with a thread profile that suits the mounting surface material in the countertop.

### CAUTION

**Do not use a countersink type of screw head. Damage will occur from use of a countersunk screw head in the plastic screw bosses**

Risers may be stacked as shown in [Figure 4b](#). Each riser increments the height of the mounted scanner by 1.5" (38.1mm). Riser pieces readily snap together or apart and allow for adjustable tilt of the scanner/L-Bracket of up to 20 degrees in 5° increments. [Figure 4b](#) provides an example of a tilted scanner.

## LED and Beeper Indicators

The scanner's beeper sounds and its green LED illuminates to indicate various functions or errors on the scanner. The tables below list these indications. One exception to the behaviors listed in the tables is that the scanner's functions are programmable, and may or may not be turned on. For example, certain indications, such as the power-up beep can be disabled using programming bar code labels.

### Green LED Indications

LED INDICATION	INDICATION	COMMENT
Power-on indication	Bright green flash	Indicates the scanner has finished all its power up tests and is now ready for operation.
Good Read Indication	Bright green flash	Indicates a bar code has been read and decoded.
Scanner Ready	Constant dim green	The scanner is ready for operation. The LED is also configurable to off when idle and ready for operation
Sleep Mode	Green LED slowly and continuously changes from off to dim to off.	The scanner is in Sleep Mode. To wake the scanner up, move an object in front of its window or press the button atop the unit. This indication is optionally configurable and may have been programmed to behave differently.
Host Disable	Constant green flash at 1 Hz (100mS on, 900mS off)	The scanner is disabled due to receiving a disable command from the POS terminal.
Diagnostics	Varies (see "Error Codes" on page 1-4 for more information)	The LED can provide diagnostic feedback if the scanner discovers a problem during SelfTest.
Prog. Mode	See <a href="#">Host Disable</a> above.	The scanner is in Programming Mode.

### BEEPER FUNCTIONS

BEEPER INDICATION	INDICATION	COMMENT
Power On Beep	Single beep	The Power-On Beep indication is a configurable feature which can be enabled or disabled. When enabled, this beep indicates the scanner has finished all its power up tests and is now ready for operation.
Good Read Indication	Single beep	The good read beep indication is configurable. Options include: Enable/disable, frequency, duration and volume. See <a href="#">LED and Beeper Indicators on page 23</a> for more information.
Diagnostics	Varies (see "Error Codes" on page 1-4 for more information)	The Beeper can provide diagnostic feedback if the scanner discovers a problem during SelfTest.
Programming Mode Indications	Varies depending upon the feature(s) being configured.	The Beeper will sound as programming bar code labels are scanned, indicating progress during scanner configuration.

## Programming

The scanner is typically factory-configured with a set of default features standard to the interface type you ordered. After scanning the interface bar code from the [Interface Related Features](#) section, you can select other options and customize your scanner through use of the instructions and programming bar codes available in that section and also the [Data Editing](#) and [Symbologies](#) chapters of this manual.

### Using the Programming Bar Codes

This manual contains feature descriptions and bar codes which allow you to reconfigure your scanner. Some programming bar code labels, like the label below for resetting defaults, require only the scan of that single label to enact the change. Most of the programming labels in this manual, however, require the scanner to be placed in Programming Mode prior to scanning them. Scan a START/END bar code once to enter Programming Mode. Once the scanner is in Programming Mode, you can scan a number of parameter settings before scanning the START/END bar code a second time, which will then accept your changes, exit Programming Mode and return the scanner to normal operation.

### Resetting the Standard Product Defaults

If you are unsure of what programming options are in your scanner, or you've changed some options and want the factory settings restored, scan the *Standard Product Default Settings* bar code below. This will copy the factory configuration for the currently active interface to the current configuration.

Standard Product Default Set-

The programming section lists the factory default settings for each of the menu commands for the standard RS-232 interface in **BOLD** text on the following pages. Exceptions to default settings for the other interfaces can be found in [Appendix D, Factory Default Settings](#).

### Data Matrix Programming Labels

Some scanners can be configured using Data Matrix programming labels. This feature is **ONLY** available for scanners with 2D capability.

Contact Technical Support to request Data Matrix programming labels.

## Bar Code Mask

Cut a hole in this page and remove it from the manual as indicated to create a sleeve through which bar codes (starting in the following section) can be individually viewed and scanned. It is important that only one bar code at a time be presented to the scanner.

- 1. Bar Code Mask Sheet
- 2. Bar Code
- 3. Manual (folded)

## Going Green

Thank you for using the bar code mask on the opposite side of this page. This manual has been formatted to minimize the quantity of pages needed to provide all of the programming bar codes available for this product.

## LED Class

CLASS 1 LED PRODUCT APPARECCHIO LED CLASSE 1

LED KLASSE 1 APPAREIL A LED DE CLASSE 1

IEC / EN 60825-1:2007

Max output of LED radiation: 3.21mW per pulse at 100mm

Pulse duration: 200µs

Emitted wavelength 625nm

# Chapter 2

## General Features

### Double Read Timeout for Linear Labels

This Double Read Timeout feature sets a time limit that determines how much time must pass before reading the same linear label again (e.g. two identical items in succession).

	START / END
PROGRAMMING bar codes	
0.1 Second	
	0.2 Second
0.3 Second	
	<b>0.4 Second DEFAULT</b>
0.5 Second	
	0.6 Second

Double Read Timeout for Linear Labels — cont.

	START / END
PROGRAMMING bar code	
0.7 Second	
	0.8 Second
0.9 Second	
	1 Second

## Double Read Timeout for 2D Labels

This Double Read Timeout feature specifies the minimum allowable time between consecutive good reads of the same PDF 417, Micro PDF 417 Data Matrix, QR Code, Maxicode, Aztec or Composite label.

	START / END
PROGRAMMING bar codes	
0.7 Second DEFAULT	
	1 Second
1.5 Seconds	
	1.65 Seconds
1.8 Seconds	
	1.95 Seconds
2 Seconds	
	2.55 Seconds

# Scanner Button Options

This feature allows the user to configure the scanner (volume) button to different modes of operation.

Options are:

- All functions (volume, tone, diagnostics, and reset)
- Enable only volume, tone, and reset
- Enable reset only
- Disable all button functions

		START / END
PROGRAMMING bar codes		
Scanner Button Options = All functions		
	<b>Scanner Button Options = Enable only volume, tone, and reset DEFAULT</b>	
Scanner Button Options = Enable reset only		
	Scanner Button Options = Disable all button functions	

# Camera Button Mode

Controls the function associated with the "Picture Taking" button

Options are:

- Normal Take Picture operation
- Activates Cell Phone Toggle Mode when not taking picture
- Activates Cell Phone One-Shot Mode when not taking pictures

		START / END
PROGRAMMING bar codes		
<b>Camera Button Mode = Normal Take Picture operation DEFAULT</b>		
	Camera Button Mode = Activates Cell Phone Toggle Mode when not taking picture	
Camera Button Mode = Activates Cell Phone One-Shot Mode when not taking pictures		

# Auto Cell Phone Mode

Auto Cell Phone Mode enables the scanner to read bar codes on a cell phone display without user intervention. For high ambient light conditions, button cell phone mode is recommended. (See “Camera Button Mode” on page 15.)

## Auto Cell Phone Mode Enable

Enables/disables Auto Cell Phone Mode.

START / END		
PROGRAMMING bar codes		
	Auto Cell Phone Mode = Disable DEFAULT	
Auto Cell Phone Mode = Enable Normal		
	Auto Cell Phone Mode = Enable Sensitive	
Auto Cell Phone Mode = Enable Sensitive Ambient		

# LED Level

This feature defines the LED intensity level by pulse width.

		START / END
PROGRAMMING bar codes		
LED Level = Medium		
	LED Level = Low	
LED Level = High DEFAULT		

# Auxiliary Port Mode

Specifies the function associated with the auxillary interface.

Choices are:

- Disabled
- 01=Serial Handheld Enabled
- 02=PIR/CT Output plus Diagnostics Reporting

	START / END
PROGRAMMING bar codes	
<b>Disable Auxiliary Port Mode DEFAULT</b>	
	Auxiliary Port Mode = Serial Handheld Enabled
Auxiliary Port Mode = PIR/CT Output plus Diagnostics Reporting	

# Auxiliary Port Baud Rate

Specifies baud rate of auxillary port when operating in PIR/CT mode.

	START / END
PROGRAMMING bar codes	
Auxiliary Port Baud Rate = 1200	
	Auxiliary Port Baud Rate = 2400
Auxiliary Port Baud Rate = 4800	
	Auxiliary Port Baud Rate = 9600
Auxiliary Port Baud Rate = 19200 DEFAULT	
	Auxiliary Port Baud Rate = 38400
Auxiliary Port Baud Rate = 57600	
	Auxiliary Port Baud Rate = 115200

# Productivity Index Reporting (PIR)

When PIR is enabled, label quality data is appended to decoded data before being presented to the POS. The PIR feature allows the scanner to provide information to an external computer, indicating how easy the label was to read.

NOTE

This value-added feature is a factory-programmed option. Contact your dealer for information about upgrading your system to include this advanced capability.

	START / END
PROGRAMMING bar codes	
<div>Disable DEFAULT</div>	
	Enable

## Sleep Mode

This feature specifies the amount of time with no bar code reads before the scanner enters sleep mode.

# LED and Beeper Indicators

## Power On Alert

Disables or enables the indication (a single beep) that the scanner has finished all its power up tests and is now ready for operation.

	START / END
PROGRAMMING bar codes	
Disable	
	Enable DEFAULT

## External Read Indicator (ERI) Active State High

This feature is available only through use of a special cable.

### NOTE

START / END	
PROGRAMMING bar codes	
	ERI Active State = High
ERI Active State = Low DEFAULT	

ERI Timeout

Specifies the amount of time the External Read Indicator (ERI) signal is held active for a good read.

START / END

PROGRAMMING bar codes

Sets the ERI timeout duration using hex values from 000 to 255 in increments of ten milliseconds (10ms or 0.01 seconds). To configure this feature, scan the “START/END” bar code above to place the unit in Programming Mode, then the “Set ERI Timeout,” followed by the two digits (zero padded) from the Alphanumeric table in [Appendix C, Alpha-Numeric Pad](#) representing the desired time value. Exit programming mode by scanning the “START/END” bar code again.

**DEFAULT SETTING FOR THIS FEATURE: 20 milliseconds (02)**

Set ERI Timeout

Good Read: When to Indicate

This feature specifies when the scanner will provide indication (beep and/or flash its green LED) upon successfully reading a bar code. Choices are:

- Good Read = Indicate after decode
- Good Read = Indicate after transmit
- Good Read = Indicate after CTS goes inactive, then active

**This option (Indicate after CTS goes inactive, then active), which uses CTS, is only valid for RS-232 interfaces.**

NOTE

	START / END
PROGRAMMING bar codes	
After Decode DEFAULT	
	After Transmit
After CTS goes inactive, then active	

## Good Read Beep Control

This feature enables/disables the scanner’s ability to beep upon a successful decode of a bar code.

	START / END
PROGRAMMING bar codes	
Disable	
	Enable DEFAULT

## Good Read Beep Frequency

Adjusts the good read beep to sound at a selectable low, medium or high frequency, selectable from the list below. (Controls the beeper’s pitch/tone.)

	START / END
PROGRAMMING bar codes	
Low	
	Medium DEFAULT
High	

Good Read Beep Length

Specifies the duration of a good read beep.

	START / END

15%	

# Chapter 3

## Image Capture

### Image Capture

#### How to Capture an Image

There are two methods of capturing images as discussed below:

- [Image Capture to a microSD Card by Scanning a Special Label](#)
- [Image Capture to the Host by Host Command](#)

#### Image Capture to a microSD Card by Scanning a Special Label

Insert a microSD card into the scanner, scan a capture label and place the item to be captured in front of the scanner. Press and release the Camera Button. The image will be written to the microSD card five seconds after button release.

The format, size, contrast, brightness and compression use the configured values.

This Capture label is as follows:

<FNC3>IMAGEFAUTO<CR>

#### NOTE

The Capture label will not read unless a microSD card is inserted.

The image filename is automatically increased from image000 to image999.

The date image file generated is not actual, since no real time clock is embedded in the scanner.

## Image Capture to the Host by Host Command

This feature is only available for RS-232 and USB COM interfaces.

### NOTE

If the **USB COM** interface has been selected, follow the [USB COM Interface Set-up instructions in the Interface Related Features chapter of this guide](#).

The host command format is as follows:

**P**<cnt>p**SBC**

where:

**P** - ASCII 'P' used as preamble of pass-through commands

**<cnt>** - binary value of 4 indicating 4 bytes to follow

**p** - ASCII lowercase 'p' ; command to take a picture

**S** - size value of image as ASCII character

‘S’ == uses scanner's configuration value

‘0’-VGA, (640X480)

‘1’-WVGA, (752X480)

‘2’-SXGA, (1280x1027)

‘3’-CIF (320x240)

**B** - brightness value in ASCII

‘B’ == uses scanner's configuration value CI\_IMAGE\_BRIGHTNESS

else ‘0’ thru ‘9’ specifies brightness

**C** - contrast value in ASCII

‘C’ == uses scanner configuration value CI\_IMAGE\_CONTRAST

else ‘0’ thru ‘9’ specifies contrast

IF the image is of a type the scanner supports, capture and transmission occurs, and the command is of proper format

THEN

The scanner will transmit an ACK (0x06) to the Host in response to this command.

The image data transmission starts with a 4 byte binary field representing (Big Endian) number of bytes to follow.

If the “number of bytes to follow” value is zero, there was a problem with generating the image and the request should be retried.

ELSE

The scanner will transmit a BEL (0x07) to the Host in response to this command.

ENDIF

## Image Compression

Specifies the starting image compression factor for JPEG images. A higher number specifies a higher quality image with less compression than a relative lower number for the same image.

A value of 100 means minimal compression. A value of 1 means maximum compression at a loss of quality. Follow these steps to program this feature:

1. Scan the START bar code.
2. Scan the Set Image Compression bar code.
3. Turn to [Alpha-Numeric Pad](#) and scan the two digits (zero-padded) representing the desired compression. The configurable range is 01-0x64 by increments of 01.
4. Scan the END bar code.

START / END	
PROGRAMMING bar codes	
	Set Image Compression DEFAULT SETTING IS 100 (minimal compression — higher quality)

## Image Format

Specifies the format of the captured image

START / END	
PROGRAMMING bar codes	
	Image Format = JPG DEFAULT
Image Format = BMP	

# Image Size

Specifies the size of the image capture. Choices are:

- VGA
- WVGA
- SXGA, Full Size
- CIF

START / END		
PROGRAMMING bar codes		
	Image Size = VGA DEFAULT	
Image Size = WVGA		
	Image Size = SXGA, Full Size	
Image Size = CIF		

## Image Brightness

This feature sets the image brightness value. Follow these instructions to configure this feature:

1. Scan the START bar code.
2. Scan the Set Image Brightness bar code.
3. Turn to [Alpha-Numeric Pad](#) and scan the two digits (zero-padded) representing the desired brightness in decimal notation. The configurable range is 01-0x0A by increments of 01.
4. Scan the END bar code.

START / END	
PROGRAMMING bar codes	
	Set Image Brightness DEFAULT SETTING FOR THIS FEATURE: 09

## Image Contrast

This feature sets the image contrast value. Follow these instructions to configure this feature:

1. Scan the START bar code.
2. Scan the Set Image Contrast bar code.
3. Turn to [Alpha-Numeric Pad](#) and scan the two digits (zero-padded) representing the desired contrast in decimal notation. The configurable range is 01-0x0A by increments of 01.
4. Scan the END bar code.

START / END	
PROGRAMMING bar codes	
	Set Image Contrast DEFAULT SETTING FOR THIS FEATURE: 09

## NOTES

# Chapter 4

## Interface Related Features

At the time of this writing, the reader supports the interfaces listed in [Table 1](#). Select the desired interface type from the table, then reference the page number given for the customizable features section associated with each interface. See [Table 2](#) for a description of each Keyboard Wedge interface type (A through Y as listed).

**Table 1. Interfaces Supported**

RS-232	Page	Keyboard Wedge	
RS-232 Standard	39	Keyboard Wedge A <sup>a</sup>	40
RS-232 Wincor-Nixdorf	39	Keyboard Wedge B <sup>a</sup>	40
IBM		Keyboard Wedge C <sup>a</sup>	40
IBM 4683 Port 5B	39	Keyboard Wedge D <sup>a</sup>	40
IBM 4683 Port 9B	39	Keyboard Wedge E <sup>a</sup>	40
IBM 4683 Port 17	39	Keyboard Wedge F <sup>a</sup>	40
USB		Keyboard Wedge G <sup>a</sup>	40
USB-OEM	39	Keyboard Wedge H <sup>a</sup>	40
USB Keyboard	39	Keyboard Wedge I <sup>a</sup>	40
USB COM Interface	39	Keyboard Wedge J <sup>a</sup>	40

a. Consult [Table 2](#) for more information regarding keyboard interface types.

**The correct interface cable is generally included for the reader interface type you ordered.**

### NOTE

**Table 2. Keyboard Wedge Interface Reference**

I/F Type	PCs Supported
A	PC/XT w/Alternate Key Encoding
B	AT, PS/2 25-286, 30-286, 50, 50Z, 60, 70, 80, 90 & 95 w/Alternate Key Encoding
C	PS/2 25 and 30 w/Alternate Key Encoding
D	PC/XT w/Standard Key Encoding
E	AT, PS/2 25-286, 30-286, 50, 50Z, 60, 70, 80, 90 & 95 w/Standard Key Encoding
F	PS/2 25 and 30 w/Standard Key Encoding
G	IBM 3xxx w/122 keyboard
H	IBM 3xxx w/102 keyboard
I	PS/55 5530T w/104 keyboard
J	NEC 9801

# Interface Features

## Obey/Ignore Host Commands

When set to ignore host commands, the scanner will ignore all host commands except for the minimum set necessary to keep the interface active and transmit labels For normal operation of the interface, select Obey Host Commands.

START / END	
PROGRAMMING bar codes	
	Obey Host Commands DEFAULT
Ignore Host Commands	

Interface Features — cont.

Host Transmission Buffers

Specifies the number of host transmission(s) that may be buffered. By buffering data from a bar code, the scanner can continue to read a new bar code while the old one is being transmitted to the host. Selecting BUFFERS = 1 means that the first bar code must be transmitted before a new one can be read. A selection of BUFFERS = 2 means that a new bar code can be read while data from the first bar code is transmitted.

When a DISABLE SCANNER command is received from the host, the scanner will continue to transmit all data that is buffered.

START / END		
PROGRAMMING bar codes		
	Host Transmission Buffers = 1	
Host Transmission Buffers = 2 DEFAULT

2 Stop Bits		
Parity		
	Parity = None DEFAULT	
Parity = Even		
	Parity = Odd	

## RS-232 Interface Features — cont.

### Hardware Flow Control

**Disable Hardware Control**— The scanner transmits to the host regardless of any activity on the CTS line.

**Enable CTS Flow Control**— The CTS signal controls transmission of data to the host.

**Enable CTS Scan Control**— The CTS line must be active for the scanner to read and transmit data. While the CTS line is inactive, the scanner remains in a host-disabled state; following a successful label transmission, the CTS signal must transition to inactive and then to active to enable scanning for the next label.

START / END		
PROGRAMMING bar codes		
	<b>Disable Hardware Control</b> <b>DEFAULT</b>	
Enable CTS Flow Control		
	Enable CTS Scan Control	

RS-232 Interface Features — cont.

Intercharacter Delay

This delay is inserted after each data character transmitted. If the transmission speed is too high, the system may not be able to receive all characters. You may need to adjust the delay to make the system work properly.

START / END		
PROGRAMMING bar codes		
	Inter-Char Delay = No Delay DEFAULT	
Interchar Delay = 10 msec		
	Interchar Delay = 20 msec	
Interchar Delay = 30 msec		
	Interchar Delay = 40 msec	
Interchar Delay = 50 msec		
	Interchar Delay = 60 msec	
Interchar Delay = 70 msec		

## Intercharacter Delay — cont.

START / END	
PROGRAMMING bar codes	
	Interchar Delay = 80 msec
Interchar Delay = 90 msec	

## Software Flow Control

Disables/Enables software control using XON/XOFF characters.

START / END	
PROGRAMMING bar codes	
	<b>Disable Software Flow Control DEFAULT</b>
Enable Software Flow Control	

# RS-232 Interface Features — cont.

## Host Echo

When enabled, this feature passes all data through the scanner to the host as it comes in. This feature is used for applications where “daisy chaining” of RS-232 devices onto the same cable is necessary. If, for example, one of the devices in the chain is a terminal where someone is entering data while another person is simultaneously scanning a bar code requiring transmission to the host, the scanner will wait for the RS-232 channel to be quiet for a specified period of time (set via *RS-232 Host Echo Quiet Interval*). The scanner can be set to observe this delay before sending its data in order to avoid RS-232 transmission conflicts.

START / END		
PROGRAMMING bar codes		
	Disable Host Echo DEFAULT	
Enable Host Echo		

## RS-232 Interface Features — cont.

### Host Echo Quiet Interval

This setting specifies the time interval of RS-232 channel inactivity which must transpire before the scanner will break the host echo loop to transmit the bar code data that has just been scanned to the host.

START / END		
PROGRAMMING bar codes		
	Host Echo Quiet Interval = 0msec	
Host Echo Quiet Interval = 10msec DEFAULT		
	Host Echo Quiet Interval = 20msec	
Host Echo Quiet Interval = 30msec		
	Host Echo Quiet Interval = 40msec	
Host Echo Quiet Interval = 50msec		
	Host Echo Quiet Interval = 60msec	
Host Echo Quiet Interval = 70msec		

Host Echo Quiet Interval — cont.

START / END		
PROGRAMMING bar codes		
	Host Echo Quiet Interval = 80msec	
Host Echo Quiet Interval = 90msec		
	Host Echo Quiet Interval = 100msec	

Signal Voltage: Normal/TTL

Specifies whether the RS-232 interface provides TTL levels on the output pins TxD and RTS.

START / END		
PROGRAMMING bar codes		
	Signal Voltage: Normal RS-232 DEFAULT	
Signal Voltage: TTL		

**RS-232 Invert**

Enables/disables inversion of RS-232 TXD and RXD signals.

START / END	
PROGRAMMING bar codes	
	<b>Disable RS-232 Invert</b> DEFAULT
Enable RS-232 Invert	

**Beep on ASCII BEL**

Enables/disables ability of scanner to beep (sound a good read tone) on receiving an ASCII BEL (07 hex).

START / END	
PROGRAMMING bar codes	
	<b>Enable Beep on ASCII BEL</b> DEFAULT
Disable Beep on ASCII BEL	

**Beep on Not on File**

Select for the host to beep (or not) when a not-on-file (host command) condition is detected by the host.

START / END	
PROGRAMMING bar codes	
	Disable Beep on Not On File
Enable Beep on Not On File DEFAULT	

## ACK NAK Options

This enables/disables the ability of the scanner to support the RS-232 ACK/NAK protocol. When configured, the scanner and/or host sends an “ACK” when it receives data properly, and sends “NAK” when the data is in error. Selections for this option are:

- Disable
- Enable for label transmission — the scanner expects an ACK/NAK response from the host when a label is sent
- Enable for host-command acknowledge — the scanner will respond with ACK/NAK when the host sends a command
- Enable for label transmission and host-command acknowledge

START / END	
PROGRAMMING bar codes	
	<b>Disable ACK NAK DEFAULT</b>
Enable ACK NAK for Transmission	
	Enable ACK NAK for host command acknowledge
Enable ACK NAK for transmission and host command	

# RS-232 Interface Features — cont.

## ACK Character

START / END

PROGRAMMING bar codes

Sets the ACK character from the set of ASCII characters or any decimal value from 000 to 255. Pad entries of less than three digits with zeros, as in "005". To configure this feature, scan the "START/END" bar code above to place the unit in Programming Mode, then the "Set ACK Character," followed by the digits from the Alphanumeric table in [Appendix C, Alpha-Numeric Pad](#) representing your desired character. Exit programming mode by again scanning the "START/END" bar code above.

DEFAULT SETTING FOR THIS FEATURE: 006

Set ACK Character

## NAK Character

START / END

PROGRAMMING bar codes

Sets the NAK character from the set of ASCII characters or any decimal value from 000 to 255. Pad entries of less than three digits with zeros, as in "005". To configure this feature, scan the "START/END" bar code above to place the unit in Programming Mode, then the "Set NAK Character," followed by the digits from the Alphanumeric table in [Appendix C, Alpha-Numeric Pad](#) representing your desired character. Exit programming mode by again scanning the "START/END" bar code above.

DEFAULT SETTING FOR THIS FEATURE: 021

Set NAK Character

## RS-232 Interface Features — cont.

### Retry on ACK NAK Timeout

Enables/disables retry after the configurable ACK NAK Timeout Value (set in the following feature) has expired.

START / END	
PROGRAMMING bar codes	
	Disable Retry on ACK NAK Timeout
Enable Retry on ACK NAK Timeout DEFAULT	

### ACK NAK Timeout Value

START / END	
PROGRAMMING bar codes	
<p>This item specifies the time the scanner will wait for an ACK character from the host following a label transmission.            00 = Infinite timeout            01 - 75 = Timeout in 200-millisecond increments            To configure this feature, scan the “START/END” bar code above to place the unit in Programming Mode, then the “Set ACK NAK Timeout Value,” followed by the two digits (zero padded) from the Alphanumeric table in <a href="#">Appendix C, Alpha-Numeric Pad</a> representing your desired value. Exit programming mode by again scanning the “START/END” bar code above.</p>	
<b>DEFAULT SETTING FOR THIS FEATURE: 01 (200 msec)</b>	
	Set ACK NAK Timeout Value

# RS-232 Interface Features — cont.

## ACK NAK Retry Count

START / END	
PROGRAMMING bar codes	
<p>This feature sets the number of times for the scanner to retry a label transmission under a retry condition.</p> <p>000 = No retry 001 - 254 = Retry for the specified number of times 255 = Retry forever</p> <p>To configure this feature, scan the “START/END” bar code above to place the unit in Programming Mode, then the “Set ACK NAK Retry Count,” followed by the three digits (zero padded) from the Alphanumeric table in <a href="#">Appendix C, Alpha-Numeric Pad</a> representing your desired retry count. Exit programming mode by again scanning the “START/END” bar code above</p>	
DEFAULT SETTING FOR THIS FEATURE: 003	
	Set ACK NAK Timeout Value

## RS-232 Interface Features — cont.

### ACK NAK Error Handling

This item specifies the method the scanner will use to handle errors detected while waiting to receive the ACK character from the host. Errors include unrecognized host commands and communication errors such as parity or framing errors. Choices are:

00 = Ignore errors detected (recommended setting)

01 = Process error as valid ACK character (risk of lost label data)

02 = Process error as valid NAK character (risk of duplicate label data)

START / END	
PROGRAMMING bar codes	
	<b>Ignore Errors Detected DEFAULT</b>
Process error as valid ACK character	
	Process error as valid NAK character

# RS-232 Interface Features — cont.

## Transmission Failure Indication

Enables/disables bad-label indication upon transmission failure.

START / END	
PROGRAMMING bar codes	
	Disable Transmission Error Indication
Enable Transmission Error Indication DEFAULT	

## Single Cable RS-232

### Single Cable RS-232 Options

The RS-232 Single Cable interface shares some configuration options with other RS-232 interfaces. Rather than repeat them in this section as Single Cable options, please find them referenced as follows:

- RS-232 Baud Rate on [page 43](#)
- RS-232 Number of Data Bits on [page 44](#)
- RS-232 Number of Stop Bits on [page 44](#)
- RS-232 Parity on [page 44](#)
- RS-232 Software Flow Control on [page 47](#)
- RS-232 Beep on Not on File on [page 52](#)
- RS-232 Label ID Control on [page 76](#)

## Single Cable RS-232 RTS CTS Selection

Specifies how RTS and CTS are used to control the data flow. RTS is controlled by the Scanner and can be continuously held high/low, or can be asserted during label transmission. The scanner looks at CTS, as the configuration values state, to determine when to send label data.

Choices are:

- Option 0 = RTS is held in low state and CTS is ignored
- Option 1 = RTS is held in high state and CTS is ignored
- Option 2 = Assert RTS and wait for CTS to be asserted
- Option 3 = Assert RTS and ignore CTS
- Option 4 = RTS held low, wait for CTS to be asserted
- Option 5 = RTS held high, wait for CTS to be asserted

START / END	
PROGRAMMING bar codes	
	RTS CTS Selection = RTS is held in low state and CTS is ignored
RTS CTS Selection = RTS is held in high state and CTS is ignored	
	RTS CTS Selection = Assert RTS and wait for CTS to be asserted
RTS CTS Selection = Assert RTS and ignore CTS	
	RTS CTS Selection = RTS held low, wait for CTS to be asserted
RTS CTS Selection = RTS held high, wait for CTS to be asserted <b>DEFAULT</b>	

## Single Cable RS-232 Use BCC

Enables/disables the ability of the scanner to use BCC.

START / END		
PROGRAMMING bar codes		
	Disable BCC	
Enable BCC DEFAULT		

## Single Cable RS-232 Use ACK/NAK

Enables/disables the ability of the scanner to use ACK/NAK.

START / END		
PROGRAMMING bar codes		
	Disable ACK/NAK	
Enable ACK/NAK DEFAULT		

## Single Cable RS-232 Use STX

Enables/disables the ability of the scanner to use STX.

START / END	
PROGRAMMING bar codes	
	Disable STX
Enable STX DEFAULT	

## Set Single Cable RS-232 STX Character

This feature selects the STX character.

To specify the STX Character:

1. Scan the START/END bar code.
2. Scan the bar code, SET SINGLE CABLE RS-232 STX CHARACTER below. You'll need to cover any unused bar codes on this and the facing page to ensure the scanner reads only the bar code you intend to scan.
3. Scan the appropriate characters/digits from the keypad in [Appendix C](#) that represent the decimal designation for the desired character. A table containing the ASCII Character Set and their corresponding hex values is available in the inside back cover of this manual. ASCII parameters must be input by scanning decimal digits for each character. Pad all numbers with leading zeroes to yield a three-digit entry (001-127). Thus, to set a single character value of A, bar codes containing the digits '0', '6' and '5' must be scanned. The selectable range for this option is any decimal value from 001 to 127.
4. The scanner will automatically exit Programming Mode when the appropriate amount of digits have been scanned.

SET SINGLE CABLE RS-232 STX CHARACTER

## Single Cable RS-232 Use ETX

Enables/disables the ability of the scanner to use ETX.

START / END	
PROGRAMMING bar codes	
	Disable ETX
Enable ETX DEFAULT	

## Set Single Cable RS-232 ETX Character

Allows selection of the ETX character.

To specify the ETX Character:

1. Scan the START/END bar code.
2. Scan the bar code, SET SINGLE CABLE RS-232 ETX CHARACTER below. You'll need to cover any unused bar codes on this and the facing page to ensure the scanner reads only the bar code you intend to scan.
3. Scan the appropriate characters/digits from the keypad in [Appendix C](#) that represent the decimal designation for the desired character. A table containing the ASCII Character Set and their corresponding decimal values is available in the inside back cover of this manual. ASCII parameters must be input by scanning decimal digits for each character. Pad all numbers with leading zeroes to yield a three-digit entry (001-127). Thus, to set a single character value of A, bar codes containing the digits '0', '6' and '5' must be scanned. The selectable range for this option is any decimal value from 001 to 127.
4. The scanner will automatically exit Programming Mode when the appropriate amount of digits have been scanned.

SET SINGLE CABLE RS-232 ETX CHARACTER

## Single Cable Pacesetter Plus

Enables/disables sending Pacesetter Plus information as trailers to UPC/EAN labels.

START / END	
PROGRAMMING bar codes	
	<b>Disable Pacesetter Plus DEFAULT</b>
Enable Pacesetter Plus	

## Single Cable Datalogic Extensions

Enables Datalogic extensions to the Single Cable RS-232 interface.

START / END	
PROGRAMMING bar codes	
	<b>Disable Datalogic Extensions DEFAULT</b>
Enable Datalogic Extensions	

## USB-OEM Interface Features

### USB-OEM Device usage

The USB-OEM protocol allows for the scanner to be identified as one of two different types of bar code scanners. Depending on what other scanners you may already have connected to a USB-OEM POS, you may need to change this setting to enable all devices to communicate. Options are:

- Table Top Scanner
- Handheld Scanner

START / END		
PROGRAMMING bar codes		
	<b>Configure as Table Top Scanner DEFAULT</b>	
Configure as Handheld Scanner		

## IBM

### IBM Transmit Labels in Code 39 Format

This feature enables/disables scanner's ability to set a symbology identifier for a specified label to Code 39 before transmitting that label data to an IBM host. This applies to: Code 128, Codabar and Code 93 for USB-OEM; Code 128, Codabar and Code 93 for IBM Port 5B; and Codabar and Code 93 for IBM Port 9B.

START / END		
PROGRAMMING bar codes		
	<b>Disable Convert to Code 39 DEFAULT</b>	
Enable Convert to Code 39		

# Keyboard Wedge

and

# USB Keyboard

As a keyboard interface, the scanner supports most popular PCs and IBM terminals. The installation of the wedge is a fairly simple process that doesn't require any changes of software or hardware.

All of the options in this section apply to the Keyboard Wedge, however, only some apply to USB Keyboard.

NOTE

## Keyboard Layout

The Keyboard Layout option supports many countries. For details about Keyboard Layout, please refer to your operating system manual.

## Intercharacter Delay

START / END	
PROGRAMMING bar codes	
<p>One-half of the delay specified below is inserted between scancodes within each character. If the transmission speed is too high, the system may not be able to receive all characters. You may need to adjust the delay to make the system work properly. Selectable from 00 to 99 in 10msec increments.</p> <p>To configure this feature, scan the "START/END" bar code above to place the unit in Programming Mode, then the "Set Intercharacter Delay," followed by the two digits (zero padded) from the Alphanumeric table in <a href="#">Appendix C, Alpha-Numeric Pad</a> representing your desired length. Exit programming mode by again scanning the "START/END" bar code above/</p> <p><b>DEFAULT SETTING FOR THIS FEATURE:</b> <b>00 (No Delay)</b></p>	
	Set Intercharacter Delay

# USB COM Interface Set-up

The scanner has two USB COM interfaces, USB COM and USB COM DL (Datalogic). The Datalogic USB-COM driver works for both USB COM interfaces.

Before plugging your scanner into the Host PC, please ensure you have already copied the executable DLS-USB-COM driver file to your PC and that the scanner's interface is set to USB COM or USB COM DL. The DLS-USB-COM driver is provided by Datalogic or downloaded from the Datalogic website listed on the back cover of this manual.

1. Execute the DLS-USB-COM driver file.
2. When the scanner is first plugged into the PC, Windows will bring up the "Found New Hardware" message.
3. The installation is complete.

## NOTES

# Chapter 5

## Data Editing

### Data Editing Overview

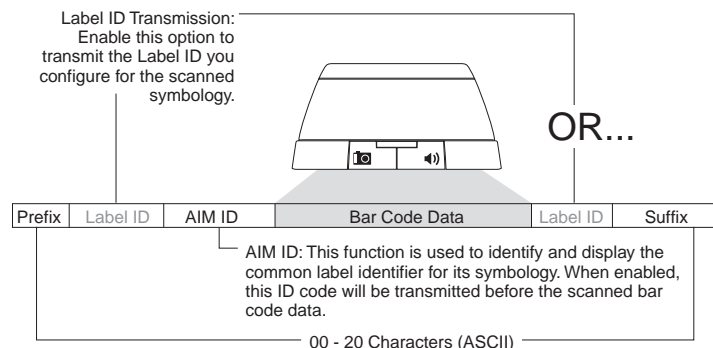

#### CAUTION

It is not recommended to use these features with IBM interfaces.

When a bar code is scanned, additional information can be sent to the host computer along with the bar code data. This combination of bar code data and supplementary user-defined data is called a “message string.” The features in this chapter can be used to build specific user-defined data into a message string.

There are several types of selectable data characters that can be sent before and after scanned data. You can specify if they should be sent with all symbologies, or only with specific symbologies. Figure 1 shows the available elements you can add to a message string:

Figure 1. Breakdown of a Message String

### Please Keep In Mind...

- Modifying a message string is not a mandatory requirement. Data editing is sophisticated feature allowing highly customizable output for advanced users. Factory default settings for data editing is typically set to NONE.
- A prefix or suffix may be applied (reference the [Symbologies](#) chapter for these settings) across all symbologies (set via the Global features in this chapter).
- You can add any character from the [ASCII Character Set](#) (from 00-FF) on the inside back cover of this manual as a prefix, suffix or Label ID.
- Enter prefixes and suffixes in the order in which you want them to appear on the output.

# Global Prefix/Suffix

Up to 20 ASCII characters may be added as a prefix (in a position before the bar code data) and/or as a suffix (in a position following the bar code data).

START / END	
PROGRAMMING bar codes	
<p>Sets up to 20 characters each from the set of ASCII characters or any hex value from 00 to FF. To configure this feature, scan the “START/END” bar code above to place the unit in Programming Mode, then the “Set Prefix” or “Set Suffix,” followed by the digits from the Alphanumeric table in <a href="#">Appendix C, Alpha-Numeric Pad</a> representing your desired character(s). Reference the section, <a href="#">Example: Setting a Prefix on page 152</a>, for more information. Exit programming mode by scanning the “START/END” bar code again (scan “START/END” twice if less than 20 characters have been selected).</p> <p><b>DEFAULT SETTING PREFIX: 00 (None)</b> <b>DEFAULT SETTING SUFFIX: 0D (CR)</b></p>	
	Set Prefix
Set Suffix	

## AIM ID

AIM (Automatic Identification Manufacturers) label identifiers are assigned from a globally standardized list — as opposed to custom label ID characters you select yourself — and can be included with scanned bar code data. AIM label identifiers consist of three characters as follows:

- A close brace character (ASCII ']' ), followed by...
- A code character (see the table below), followed by...
- A modifier character (the modifier character is symbol dependent)

SYMBOLLOGY	CHAR	SYMBOLLOGY	CHAR
UPC/EAN	E	Code 128/EAN 128	C
Code 39	A	GS1 Omnidirectional, GS1 Expanded	e
Codabar	F	Standard 2 of 5	S
Interleaved 2 of 5	I	ISBN	X <sup>a</sup>
Code 93	G

a. Default setting exceptions for PDF 417 Label ID are as follows: Default for RS-232 WN is 'Q' (0x5100). Default for USB-HID-POS is 'P ' (0x5020), or 'P-Space'.

## Label ID — cont.

For the 2D symbologies on this page, the Label ID is 4 bytes. The first 3 bytes are characters for the label ID. A 00 (hex) value in the first 3 bytes indicates the end of the label ID characters. The 4th byte is a control byte.

### NOTE

The use of the control byte is as follows:  
bit 0-if set to 1, the AIM ID is appended for that label type

# Case Conversion

This feature can convert scanned bar code data to either all lower case (a through z) or all upper case (A through Z) characters.

**NOTE**

Case conversion affects **ONLY** scanned bar code data, and does not affect Label ID, Prefix, Suffix, or other appended data.

START / END		
PROGRAMMING bar codes		
	Disable DEFAULT	
Convert to Upper Case		
	Convert to Lower Case	

## Character Conversion

Character conversion is an eight byte configuration item. The eight bytes are 4 character pairs represented in hexadecimal ASCII values. The first character in the pair is the character that will be converted. The second character in the pair is the character to convert to. If the character to convert in a pair is **FF**, then no conversion is done.

For example, if you have the character conversion configuration item set to the following:

**41423132FFFFFFFF**

The first pair is **4142** or AB (**41** hex is an ASCII capital A, **42** hex is an ASCII capital B) and the second pair is **3132** or 12 (**31** hex is an ASCII 1, **32** is an ASCII 2). The other two pairs are **FFFF** and **FFFF**.

With the label, AG15TA81, it would look as follows after the character conversion:  
BG25TB82.

The A characters were converted to the B character and the 1 characters were converted to the numeral 2 character. Nothing is done with the last two character pairs, since they are all **FF**.

To set Character Conversion:

1. Scan the START/END bar code.
2. Scan the Character Conversion bar code.
3. Determine the desired string. Up to sixteen positions can be determined as in the above example. Next, turn to the [ASCII Character Set](#) on the inside back cover of this manual and find the equivalent hex digits needed to fulfill the string.

**The positions not used must be filled with the character 'F'.**

### NOTE

4. Turn to [Appendix C, Alpha-Numeric Pad](#) and scan the bar codes representing the hex characters determined in the previous step. When the last character is scanned, the scanner will sound a triple beep.
5. Scan the START/END bar code to exit Programming Mode.

START / END

	Character Conversion
<b>DEFAULT SETTING FOR THIS FEATURE: FFFFFFFFFFFFFFFF hex (no conversion)</b>	

# NOTES

# Chapter 6

## Symbologies

The scanner supports the following symbologies (bar code types). Options for each symbology are included in this chapter.

- [UPC-A](#)
- [UPC-E](#)
- [EAN-13](#)
- [EAN-8](#)
- [GS1 DataBar Omnidirectional / Stacked Omnidirectional](#)
- [GS1 DataBar Expanded / Expanded Stacked](#)
- [GS1 DataBar Limited](#)
- [Code 39](#)
- [Code 32 Italian Pharmacode](#)
- [Code 128](#)
- [Interleaved 2 of 5](#)
- [Codabar](#)
- [Code 93](#)
- [MSI](#)

**Factory Defaults**— for the standard RS-232 interface are indicated in bold text throughout this section. Reference [Appendix D, Factory Default Settings](#) for default exceptions for your interface.

### UPC-A

#### Disable/Enable UPC-A

When disabled, the scanner will not read UPC-A bar codes.

START / END	
PROGRAMMING bar codes

## EAN-13 Flag 1 Character

Enables/disables transmission of an EAN/JAN13 Flag1 character.

START / END	
PROGRAMMING bar codes	
	Don't Transmit EAN-13 Flag 1 Char
Transmit EAN-13 Flag 1 Char DEFAULT	

## ISBN

When enabled, this feature truncates the leading three digits from labels that contain ISBN (International Standard Book Number) and appends an ISBN check character to the end of the label. These codes are used for books and magazines. Labels with ISBN codes start with "978".

### Example:

Bar Code data: "9789572222720"

Output: "9572222724"

START / END	
PROGRAMMING bar codes	
	Disable ISBN DEFAULT
Enable ISBN	

# EAN-8

The following options apply to the EAN-8 symbology.

## Disable/Enable EAN-8

When disabled, the scanner will not read EAN-8 bar codes.

START / END	
PROGRAMMING bar codes	
	Disable EAN-8
Enable EAN-8 DEFAULT	

## Check Digit Transmission

Enable this option to transmit the check Digit along with EAN-8 bar code data.

START / END	
PROGRAMMING bar codes	
	Don't Send Check Digit
Send Check Digit DEFAULT	

EAN-8 — continued

**Expand EAN-8 to EAN-13**— Expands EAN-8 data to the EAN-13 data format. Selecting this feature also changes the symbology ID to match those required for EAN-13.

START / END	
PROGRAMMING bar codes	
	Don't Expand to EAN-13 DEFAULT
Expand to EAN-13	

## EAN Two-Label

Enables/disables the ability of the scanner to decode EAN two-label pairs.

START / END	
PROGRAMMING bar codes	
	Disable EAN Two-Label
Enable EAN Two-Label	

## EAN Two-Label Combined Transmission

Enables/disables the transmitting of an EAN two label pair as one label.

START / END	
PROGRAMMING bar codes	
	EAN Two-Label Combined Transmission = Disable DEFAULT
EAN Two-Label Combined Transmission = Enable	

## Price Weight Check Digit

Enables/disables calculation and verification of price/weight check digits.

### NOTE

Applies to all UPC-A labels with a number-system character of 2 and EAN/JAN 13 labels with a

1 digit of 2

Here are the available options for this feature:

- Disable
- Enable 4-digit price/wt check-digit calculation
- Enable 5-digit price/wt check-digit calculation
- Enable European 4-digit price-weight check-digit calculation
- Enable European 5-digit price-weight check-digit calculation

START / END	
PROGRAMMING bar codes	
	Price Weight Check Digit = Disable DEFAULT
Price Weight Check Digit = Enable 4-digit price/wt	
	Price Weight Check Digit = Enable 5-digit price/wt
Price Weight Check Digit = Enable European 4-digit price/wt	
	Price Weight Check Digit = Enable European 5-digit price/wt

## Add-ons

Add-ons (or supplemental characters) are commonly added to the end of UPC/EAN bar codes. The scanner will read the add-ons if they are enabled and in the field of view. Three add-on types are supported: 2-digit, 5-digit and Code 128 add-ons. Supported options are:

**None**— This option directs the scanner to ignore add-on portion of a UPC/EAN bar code but still read the main portion of the bar code.

**2 Digits**— The scanner will optionally read 2-digit add-ons with the UPC/EAN label.

**5 Digits**— The scanner will optionally read 5-digit add-ons with the UPC/EAN label.

**Code 128 Add-on**— The scanner will optionally read Code 128 add-ons with the UPC/EAN label.

### NOTE

**Contact Customer Support for advanced programming of optional and conditional add-ons.**

Enable Check Char Transmission DEFAULT	

# Code 128

The following options apply to the Code 128 symbology.

## Disable/Enable Code 128

When this feature is disabled, the scanner will not read Code 128 bar codes.

START / END	
PROGRAMMING bar codes	
	Disable Code 128
Enable Code 128 DEFAULT	

## Disable/Enable EAN 128

When this feature is disabled, the scanner will not read EAN 128 bar codes.

START / END	
PROGRAMMING bar codes	
	Disable EAN 128
Enable EAN 128 DEFAULT	

# Code 128 — continued

## Transmit Function Characters

Enables/disables transmission of Code 128 function characters 1, 2, 3, and 4.  
Function codes are transmitted as follows:

- FNC1 = 80 hex
- FNC2 = 81 hex
- FNC3 = 82 hex
- FNC4 = 83 hex

START / END	
PROGRAMMING bar codes	
	Don't Transmit Function Characters DEFAULT
Transmit Function Characters	

# Code 128 — continued

## Length Control

**Fixed Length Decoding**— When fixed length decoding is enabled, the scanner will decode a bar code if the label length matches one of the configurable fixed lengths.

**Variable Length Decoding**— When variable length decoding is enabled, the scanner will decode a bar code if the label length falls in the range of the configurable Length 1 and Length 2 values.

START / END	
PROGRAMMING bar codes	
	Variable Length Decoding DEFAULT
Fixed Length Decoding	

## Code 128 Length 1, Length 2 Programming Instructions

See [Length 1, Length 2 Programming Instructions on page 154](#) for detailed instructions on setting this feature.

For Code 128 bar codes, only the data characters are included in the length calculations.

### NOTE

START / END	
PROGRAMMING bar codes	
 DEFAULT SETTING FOR THIS FEATURE: 01	Set Length 1
Set Length 2	 DEFAULT SETTING FOR THIS FEATURE: 80

### Code 128 Conversion to Code 39

Enables/disables expansion of Code 128 labels to Code 39.

START / END	
PROGRAMMING bar codes	
	Disable DEFAULT
Enable	

### Interleaved 2 of 5

The following options apply to the Interleaved 2 of 5 (I 2 of 5) symbology.

#### Disable/Enable Interleaved 2 of 5

When this feature is disabled, the scanner will not read Interleaved 2 of 5 bar codes.

START / END	
PROGRAMMING bar codes	
	Disable Interleaved 2 of 5 DEFAULT
Enable Interleaved 2 of 5	

## Check Digit Calculation

When enabled, the scanner will calculate the check digit of the labels.

START / END	
PROGRAMMING bar codes	
	<b>Disable Check Digit Calculation DEFAULT</b>
Enable Check Digit Calculation	

## Check Digit Transmit

Enable this option to transmit the check digit with scanned bar code data.

START / END	
PROGRAMMING bar codes	
	<b>Disable Check Digit Calculation DEFAULT</b>
Enable Check Digit Calculation	

# Interleaved 2 of 5 — continued

## Length Control

**Fixed Length Decoding**— When fixed length decoding is enabled, the scanner will decode a bar code if the label length matches one of the configurable fixed lengths.

**Variable Length Decoding**— When variable length decoding is enabled, the scanner will decode a bar code if the label length falls in the range of the configurable Length 1 and Length 2 values.

START / END	
PROGRAMMING bar codes	
	Variable Length Decoding DEFAULT
Fixed Length Decoding	

## Interleaved 2 of 5 Length 1, Length 2 Programming Instructions

See [Length 1, Length 2 Programming Instructions on page 154](#) for detailed instructions on setting this feature.

**NOTE**

For Interleaved 2 of 5 bar codes, lengths must be an even number. Additionally, all check and data characters are included in the length calculations.

START / END	
PROGRAMMING bar codes	
 DEFAULT SETTING FOR THIS FEATURE: 06	Set Length 1

# NOTES

# Chapter 7

## 2D Symbologies

---

The features in this section are available **ONLY** for models with 2D features activated.

### NOTE

## 2D Symbologies

The scanner supports the 2D symbologies (bar code types) listed below. Available options for each 2D symbology are included in this chapter.

- [PDF 417](#)
- [Micro PDF 417](#)
- [Datamatrix](#)
- [QR Code](#)
- [Maxicode](#)
- [Aztec](#)
- [Composite Labels](#)

**Factory Defaults**— for the standard RS-232 interface are indicated in bold text throughout.

PDF 417

Disable/Enable PDF 417

When disabled, the scanner will not read PDF 417 bar codes.

START / END	
PROGRAMMING bar codes	
	Disable PDF 417
Enable PDF 417 DEFAULT	

Allow Zero Length PDF 417 Reading

This enables/disables the scanner's ability to read PDF417 bar codes containing a zero length codeword.

START / END	
PROGRAMMING bar codes	
	Disable Zero Length PDF 417 Reading DEFAULT
Enable Zero Length PDF 417 Reading	

PDF 417 — cont.

Length Control

**Fixed Length Decoding**— When fixed length decoding is enabled, the scanner will decode a bar code if the label length matches one of the configurable fixed lengths.

**Variable Length Decoding**— When variable length decoding is enabled, the scanner will decode a bar code if the label length falls in the range of the configurable Length 1 and Length 2 values.

Configuring Fixed Length Decoding:

- 1. Scan the START bar code.
- 2. Scan the Fixed Length Decoding bar code.
- 3. Scan the END bar code.
- 4. Set Length 1 to the first fixed length by following the Length 1, Length 2 Programming Instructions below.
- 5. Set Length 2 to the second fixed length (or to ‘0000’ if there is only one fixed length) by following the PDF 417 Length 1, Length 2 Programming Instructions below.

Configuring Variable Length Decoding:

- 1. Scan the START bar code.
- 2. Scan the Variable Length Decoding bar code.
- 3. Scan the END bar code.
- 4. Set Length 1 to the minimum length by following the PDF 417 Length 1, Length 2 Programming Instructions below.
- 5. Set Length 2 to the maximum length by following the PDF 417 Length 1, Length 2 Programming Instructions below.

START / END

## Advanced Decoding Features

### Inverse Label Reading

This controls the method of reading inverse labels (white label on black background).

This feature is only available for GS1 DataBar and 2D symbologies.

**NOTE**

START / END		
PROGRAMMING bar codes		
	2D Read Mode = Reads only normal labels DEFAULT	
2D Read Mode = Reads both normal and inverse labels		
	2D Read Mode = Reads only inverse labels	

# UPC/EAN Quiet Zone

This feature sets a Quiet Zone requirement for UPC/EAN labels.

START / END	
PROGRAMMING bar codes	
	UPC/EAN Quiet Zone = 5 Modules
UPC/EAN Quiet Zone = 3 Modules	
	UPC/EAN Quiet Zone = 1.5 Modules

# Chapter 9

## References

---

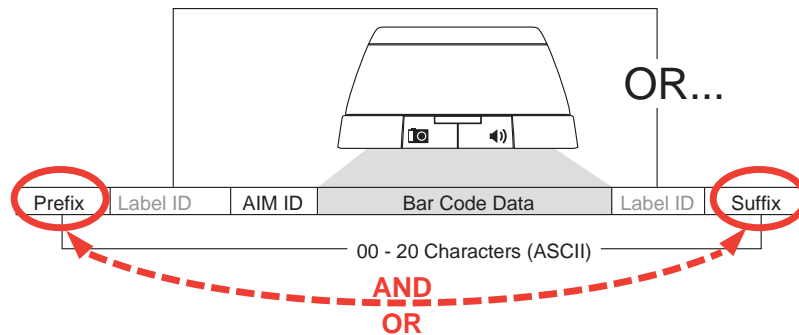

This section contains explanations and examples of selected bar code features. See the programming sections for the actual bar code labels used to configure the reader.

## Global Prefix/Suffix

Up to 20 ASCII characters may be added as a prefix (in a position before the bar code data) and/or as a suffix (in a position following the bar code data) as indicated in [Figure 3](#).

**Figure 3. Prefix and Suffix Positions**

### Example: Setting a Prefix

In this example, we'll set a prefix for all symbologies.

1. Determine which ASCII character(s) are to be added to scanned bar code data. In this example, we'll add a dollar sign ('\$') as a prefix.
2. Scan the START bar code.
3. Scan the SET PREFIX bar code.
4. Reference the [ASCII Character Set](#) on the inside back cover of this manual, to find the hex value assigned to the desired character. The corresponding hex number for the '\$' character is 24. To enter this selection code, scan the '2' and '4' bar codes from [Appendix C, Alpha-Numeric Pad](#).
5. Scan the END bar code once to finish the string, then scan END again to exit Programming Mode.

**If all 20 characters will be used in the prefix or suffix, do not scan the END bar code to finish the string. It is done automatically.**

#### NOTE

6. The resulting message string would appear as follows:

Scanned bar code data:12345

Resulting message string output: \$12345

## Label ID

A Label ID is used to identify a bar code (symbology) type. See [Appendix D, Factory Default Settings](#), for a listing for common symbologies. It can be appended previous to or following the transmitted bar code data depending upon how this option is enabled. This feature provides options for configuring custom Label IDs individually per symbology. If you wish to program the scanner to always include an industry standard label identifier for ALL symbology types, see the feature, [AIM ID on page 75](#).

The Label ID is a customizable code of up to three ASCII characters (each of which are 00-7F) followed by a control character (00-01). This control character, when set to zero, does nothing. When set to one, it appends the symbology's AIM ID to the Label ID.

**When the control character is set to 01 for UPC-A and UPC-E, it expands the label to EAN-13 and thus follows the EAN-13 Label ID settings.**

### NOTE

To configure a Label ID:

1. Scan the START bar code.
2. Select Label ID position as either BEFORE or AFTER by scanning the appropriate bar code.
3. Scan a bar code to select the symbology for which you wish to configure a custom Label ID.
4. Determine the desired character(s) (you may choose up to three) which will represent the Label ID for the selected symbology. Next, turn to the [ASCII Character Set](#) on the inside back cover of this manual and find the equivalent hex digits associated with your choice of Label ID. For example, if you wish to select an equal sign (=) as a Label ID, the chart indicates its associated hex characters as 3D.
5. Turn to [Appendix C, Alpha-Numeric Pad](#) and scan the bar codes representing the hex characters determined in the previous step. For example, to make an equal sign (=), scan '3' and 'D' followed by '0' six times. Since this is a three-character buffer, '00' is scanned for character two, '00' for character three and '00' for the control character. ('00' indicates no character.)
6. Scan the END bar code to exit programming mode.

**Figure 4. Label ID Position Options**

## Length Control

**Fixed Length Decoding**— When fixed length decoding is enabled, the scanner will decode a bar code if the label length matches one of the configurable fixed lengths.

**Variable Length Decoding**— When variable length decoding is enabled, the scanner will decode a bar code if the label length falls in the range of the configurable minimum and maximum length.

Configuring Fixed Length Decoding:

1. Scan the START/END bar code.
2. Scan the Fixed Length Decoding bar code for the desired symbology.
3. Scan the START/END bar code.
4. Set Length 1 to the first fixed length by following the [Length 1, Length 2 Programming Instructions](#) below.
5. Set Length 2 to the second fixed length (or to '00' if there is only one fixed length) by following the [Length 1, Length 2 Programming Instructions](#) below.

Configuring Variable Length Decoding:

1. Scan the START/END bar code.
2. Scan the Variable Length Decoding bar code for the desired symbology.
3. Scan the START/END bar code.
4. Set Length 1 to the first variable length by following the [Length 1, Length 2 Programming Instructions](#) below.
5. Set Length 2 to the second variable length by following the [Length 1, Length 2 Programming Instructions](#) below.

## Length 1, Length 2 Programming Instructions

1. Scan the START/END bar code.
2. Scan either the Set Length 1 or Set Length 2 bar code for the desired symbology.
3. Turn to [Appendix C, Alpha-Numeric Pad](#) and scan the two digits (zero padded) representing the length in decimal notation. The number of characters that can be set varies, depending upon the symbology. Reference the page for your selected symbology to see specific variables.
4. Scan the START/END bar code

# Appendix A

## Product Specifications

### Optical and Read Performance Parameters

Parameter	Specification
Scan Volume	250 cubic inches
Minimum Resolution	5 mil
Depth of Field (100% UPC Labels)	0 - 8" (0 - 20.32cm)
Minimum Print Contrast Ratio	25%
Skew (Yaw)	$\pm 75^\circ$
Pitch	$\pm 65^\circ$
Roll	Between 0 and 360°

### Scanner Dimensions

---

## Physical Properties

Parameter	Specification
Dimensions (Scanner only):	6" x 5.6" x 3.3" (WxHxD)
Weight (Scanner)	1 lb 4.6 oz (0.584kg)

## Electrical Parameters

Parameters	Specification	
AC Power Requirements	AC Input: 90-264 VAC, 47~63Hz	
AC Power Consumption	Real Power	
Operating (Maximum)	8.75Watts	
Operating (Nominal)	2.8Watts	
Sleep mode	2.0Watts	
DC Power Requirements	Reference for POT user	
Input Voltage	7 to 14 V DC	
Operating Current and Power at 12V DC	Current	Power
Maximum Inrush	715mA	8.6 Watts
Maximum Continuous	545mA	6.6 Watts
Nominal Scanner Only	180mA	2.2 Watts
Sleep, Scanner Only	123mA	1.5 Watts

## Environmental Parameters

Parameter	Specification
Contaminants Water and Dust	IP5x
Temperature Ranges: Operating Storage	32° F to +104° F (0° C to +40° C) -40° F to +158° F (-40° C to +70° C)
Ambient Light Indoor	0 - 6,000 lux
Ambient Light Outdoor	0 - 86,100 lux
Humidity	5% to 95% non-condensing
Beeper/Speaker	70-90dBA at a distance of 3'-3" (1 meter)
Vibration	Retail/Office

## Other Parameters

Parameter	Specification
EAS Support	YES (Checkpoint)

## Keyboard Function Key Mappings

### Keyboard Model Cross Reference

Table 1 summarizes the keyboard models, their defined protocol, scancode set, and some unique features. The remaining tables in this chapter provide the function key maps associated with each of the scancode sets.

**Table 1. Keyboard Model Cross Reference**

Model Type	I/F ID	Transmission Protocol	Scancode Set	Func. Key Map Support	Use Country Mode
PC/XT Foreign ALT Mode	Wedge A	PC/XT	Scan Set 1	No	No
AT; PS/2 25-286; PS/2 30-286; PS/2 50, 50Z; PS/2 60,70,80,90,95 Foreign ALT Mode	Wedge B	AT/PS2	Scan Set 2	No	No
PS/2 25 and 30 Foreign ALT Mode	Wedge C	AT/PS2	Scan Set 1	No	No
PC/XT U.S. Mode	Wedge D	PC/XT	Scan Set 1	Yes	No
AT; PS/2 25-286; PS/2 30-286; PS/2 50, 50Z; PS/2 60,70,80,90,95 U.S. Mode + specific country support	Wedge E	AT/PS2	Scan Set 2	Yes	Yes
PS/2 25 and 30 U.S. Mode	Wedge F	AT/PS2	Scan Set 1	Yes	No
IBM 3xxx Terminals (122-key keyboard)	Wedge G	AT/PS2	Scan Set 3	Yes	No
IBM 3xxx Terminals (102-key keyboard)	Wedge H	AT/PS2	Scan Set 3	Yes	No
PS55 5530T with JAPANESE DOS (TDOS)	Wedge I	AT/PS2	Japanese DOS	Yes	No
NEC 9801	Wedge J	NEC 9801	NEC 9801	Yes	No

## Host Commands

### Accepting RS-232 Commands

The scanner responds to the following RS-232 commands:

COMMAND	ASCII	HEX	COMMENT
Enable Scanner	E	0x45	
Disable Scanner	D	0x44	
Reset Scanner	R	0x52	
Not On File Indication	F	0x46	Long series of beeps
Beep Good Read Tone	B	0x42	Beeps if Good Read Beep is enabled
Force Good Read Tone	!	0x01	Beeps regardless of beep setting
Identification request	i	0x69	Returns long response <sup>1</sup>
Health request	h	0x68	Returns long response <sup>1</sup>
Status request	s	0x73	Returns long response <sup>1</sup>

1. Call Tech Support for information.

If one of the above commands is received, the scanner will perform the steps indicated for the command. Host commands for other interfaces are also available. Contact Tech Support for more details.

Also see the section "[Image Capture to the Host by Host Command](#)" on page 32 for details concerning that feature.

## microSD Card

### microSDHC Compatibility

At the time of this writing, the microSD card interface for this product supports SD-Memory Card Specifications/ Part 1. Physical Layer Specification; Version 1.01, but the processor MCI can communicate with SDHC Cards. For example, the scanner can perform the functions specified in this appendix for the SDA 2.0 specification. Both FAT16 and FAT32 formats are supported.

Filenames are limited to the 8.3 file naming format (i.e., FILENAME.EXT), and MUST be capitalized.

### microSD Card Insertion

1. Read all of these instructions before starting.
2. If you have not already done so, remove the scanner from its installed position to allow access to the microSD card slot.
3. Separate the scanner from its back cover.
4. Ensure there are no other cables attached to the scanner, then apply power and wait for the reset beep.
5. Lift and rotate the rubber cover to access the card slot, then carefully insert the microSD card into the slot until it "clicks" into place.

#### CAUTION

The microSD card slot is spring loaded. Keep your finger lightly in place atop the card until you are sure it is fully seated in place. See the illustration on the following page.

Use your finger or thumbnail to push in on the top edge of the card to be slightly below flush with the scanner enclosure when inserting or removing the card. This will engage/disengage the spring mechanism.

Never insert tools or other foreign objects into the microSD card slot.

6. If installed properly, you should immediately hear an audible signal upon insertion or removal of a microSD card. Various operations will also be indicated by the scanner's good read LED.

## microSD Card Removal

1. Push in gently using your finger or thumbnail to disengage and remove the microSD card. Remember to keep your finger in place atop the card's edge to avoid accidentally “launching” the card from the spring-loaded slot.
2. Reconnect all cables which were disconnected earlier.

## Autorun File Processing

After insertion of the card, the scanner will mount the microSD card and search for the file “AUTORUN.DLS”. Embedded in that file is a validation pattern of the ASCII strings “\$START\$” and “\$END\$” located at the respective starting and ending of the file.

If the validation pattern is found, the file may contain any of the following commands. The scanner will parse the file taking action according to these commands. Filenames in *italics* specify a user-defined name.

Example AUTORUN.DLS file:

```
$START$ (required)
CONFIG, FILENAME.TEX
DUMPSTATS, FILENAME.TXT
DUMPCFG, FILENAME.TEX
LOADSW, FILENAME.BIN
$END$ (required)
```

## microSD Function Summary

The following table summarizes various functions of microSD card.

FUNCTION		Image Capture	Export Status	Export Configuration	Load Applic	Load Config	Load CPLD Code	Feature Upgrade*
Direction	Scanner ⇒ microSD Card	√	√	√				
	microSD Card ⇒ Scanner				√	√	√	√
	Scanning a label	√	√					
Initiated by	AUTORUN.DLS file in microSD card		√	√	√	√	√	√

\* Contact tech support for any available feature upgrade license.

## microSD Function Details

### From Scanner to microSD Card

#### Capture and save an image to a microSD card by scanning a label.

1. Insert the microSD card into the scanner

2. Scan the Capture Label

The scanner enters image capture mode.

3. Place the item to be captured in front of the scanner.

Press and release the Camera Button. The scanner will automatically capture and save the image to the microSD card.

4. Upon scanner audio indication of completion, an image is saved to the microSD card.

#### NOTE

The image file name range is from IMAGE000 to IMAGE999. If the same name already exists in the microSD card, the scanner skips that name and uses the next. For example, if IMAGE000.JPG is already used in the microSD card, the scanner uses IMAGE001.JPG. The time stamp is not real, since scanner does not have a real time clock.

Image format (.BMP, .JPG), image size (VGA, WVGA, Full size), Brightness (0~9), contrast (0~9), and JPG compression ratio (0~100) are defined in configuration.

### Export a Configuration file from the Scanner to the microSD card

#### By AUTORUN.DLS file

1. Generate a text file by any text editor as follows and save it as AUTORUN.DLS.

```
$START$
```

```
DUMPCFG,SDCONFIG.TEX (Filename can be anything, for example "SOMETHING.TEX")
```

```
$END$
```

2. Save or copy file AUTORUN.DLS to microSD card
3. Insert the microSD card to scanner
4. Wait for 3 seconds,

A scanner configuration file named SDCONFIG.TXT is saved to the microSD card.

---

## Export Scanner Status to microSD card

The data includes scanner ID, statistics and scanner health.

### By scanning a label

1. Insert the microSD card into the scanner
2. Scan the status export label

<FNC3>STATUS<CR>

3. Upon scanner audio indication of completion, the scanner status text file named STATUS.TXT is saved to the microSD card.

### By AUTORUN.DLS file

1. Generate a text file by any text editor as follows and save it as AUTORUN.DLS  
\$START\$  
DUMPSTATS,DMPSTATS.TXT  
\$END\$
2. Save or copy the AUTORUN.DLS file to the microSD card
3. Insert the microSD card into the scanner
4. Wait for about 3 seconds.

A scanner statistics file named DMPSTATS.TXT is saved to the microSD card.

## From microSD Card to Scanner

### Application code load to scanner

#### By AUTORUN.DLS file

1. Generate a text file by any text editor as follows and save it as AUTORUN.DLS  
\$START\$  
LOADSW,R96-APP1.BIN  
\$END\$
2. Step 2: Save or copy file AUTORUN.DLS to microSD card and copy the application code (example R96-APP1.BIN) to the microSD card.
3. Insert the microSD card into the scanner.
4. Upon scanner audio indication of completion, the application code R96-APP1.BIN is loaded to the scanner. Typically, this takes about 45 seconds.

## Configuration load to scanner

### By Autorun file

1. Generate a text file by any text editor as follows and save it as AUTORUN.DLS  
\$START\$  
CONFIG,R96-CFG1.TEX  
\$END\$
2. Save or copy the autorun.dls file, and copy the CPLD code (example R96-CFG1.TEX) to the microSD card
3. Insert the microSD card into to the scanner
4. Upon scanner audio indication of completion, configuration R96-CFG1.TEX is loaded to the scanner.

---

## NOTES

# Appendix I

## Handheld Data Format Requirements

This appendix provides application notes to describe the general format of data that can be accepted by the scanner through the auxiliary port as transmitted from a handheld scanner.

### Handheld Data Format Requirements General

- 9600 bps, 8 data bits, 1 stop bit, no parity.
- RTS is used to "bracket" the data received from the handheld: RTS must be asserted high during data transmission, and de-asserted after label transmission is complete. CTS is used to hold off transmission of label from handheld.
- Symbolologies requiring fixed lengths (UPC/EAN) will enforce length requirements for validation of the label.
- Handheld will be required to transmit start and stop characters for Codabar and Code 39 labels.
- Appropriate industrial length requirements will be enforced (if configured) for validation of the label.
- Maximum label lengths will be enforced for label validation (i.e. labels longer than the maximum label size will not be validated).
- Standard Datalogic formats generally use a single prefix character. The specific formats are provided below.
- Suggest that handheld turn off audible and visual good read indications to minimize operator confusion.
- Scanner will indicate if a label of improper format has been received from the handheld by sounding a "trill."

---

## Datalogic Handheld Data Format Requirements

The following sections describe label transmission formats that are typically observed in factory configurations of Datalogic handheld scanners.

### RSS-14

- Prefix must be ASCII characters 'R4'
- Check character must be included in label
- Application identifier "01" must follow the prefix and precede the base label
- Label length excluding prefix characters must be 16 characters.
- Example: 'R40101044123456789'

### RSS Expanded

- Prefix must be ASCII characters 'R4'
- Check character must be included in label

### UPC-A

- Number system must be included in label data.
- Check digit must be included in label data and is assumed to be correct.
- Prefix must be an ASCII character 'A' - total length including prefix must be 13.
- Example: 'A060992011187'.

### UPC-A with 2-Digit Supplemental

- Number system must be included in label data.
- Check digit must be included in label data and is assumed to be correct.
- Supplemental data is appended to base label.
- Prefix must be an ASCII character 'A' - total length including prefix must be 15.
- Example: 'A06099201118712'.

### UPC-A with 5-Digit Supplemental

- Number system must be included in label data
- Check digit must be included in label data and is assumed to be correct
- Prefix must be an ASCII character 'A' - total length including prefix must be 18
- Example: 'A06099201118712345'

### UPC-A with Code 128 Supplemental

- Number system must be included in label data.
- Check digit must be included in label data and is assumed to be correct.
- Supplemental data is appended to base label.

- 
- Prefix must be an ASCII character 'A' - total length including prefix must be greater or equal to 19 Code 128 Supplemental codes are variable length having a minimum of 2 data characters).
  - Characters immediately following base label must be of the form '8100', '8101' or '8102'.
  - Example: 'A0609920111878100000951'.

### **UPC-E**

- Number system must be included in label data
- Check digit must be included in label data and is assumed to be correct
- Prefix must be an ASCII character 'E' - total length including prefix must be 9
- Example: 'E09988750'

---

### **UPC-E with 2-Digit Supplemental**

- Number system must be included in label data.
- Check digit must be included in label data and is assumed to be correct.
- Supplemental data is appended to base label.
- Prefix must be an ASCII character 'E' - total length including prefix must be 11.
- Example: 'E0998875012'.

### **UPC-E with 5-Digit Supplemental**

- Number system must be included in label data.
- Check digit must be included in label data and is assumed to be correct.
- Prefix must be an ASCII character 'E' - total length including prefix must be 14.
- Example: 'E0998875012345'.

### **UPC-E with Code 128 Supplemental**

- Number system must be included in label data.
- Check digit must be included in label data and is assumed to be correct.
- Supplemental data is appended to base label.
- Prefix must be an ASCII character 'E' - total length including prefix must be greater or equal to 15 (code 128 Supplemental codes are variable length having a minimum of 2 data characters).
- Characters immediately following base label must be of the form '8100', '8101' or '8102'.
- Example: 'E099887508101000951'.

---

## **EAN-8**

- Check digit must be included in label data and is assumed to be correct
- Prefix must be an ASCII characters 'FF' - total length including prefix must be 10
- Example: 'FF00210126'

## **EAN-8 with 2-Digit Supplemental**

- Check digit must be included in label data and is assumed to be correct.
- Supplemental data is appended to base label.
- Prefix must be an ASCII characters 'FF' - total length including prefix must be 12.
- Example: 'FF0021012612'.

## **EAN-8 with 5-Digit Supplemental**

- Check digit must be included in label data and is assumed to be correct.
- Prefix must be an ASCII characters 'FF' - total length including prefix must be 15.
- Example: 'FF0021012612345'.

## **EAN-8 with Code 128 Supplemental**

- Check digit must be included in label data and is assumed to be correct.
- Supplemental data is appended to base label.
- Prefix must be an ASCII characters 'FF' - total length including prefix must be greater than 16 (code 128 Supplemental codes are variable length having a minimum of 2 data characters).
- Characters immediately following base label must be of the form '8100', '8101' or '8102'.
- Example: 'FF002101268102000951'.

## **EAN-13**

- Check digit must be included in label data and is assumed to be correct
- Prefix must be an ASCII character 'F' - total length including prefix must be 14
- Example: 'F1101234567891'

## **EAN-13 with 2-Digit Supplemental**

- Check digit must be included in label data and is assumed to be correct
- Supplemental data is appended to base label
- Prefix must be an ASCII character 'F' - total length including prefix must be 16
- Example: 'F110123456789112'

## **EAN-13 with 5-Digit Supplemental**

- Check digit must be included in label data and is assumed to be correct.
- Prefix must be an ASCII character 'F' - total length including prefix must be 19.

- 
- Example: 'F110123456789112345'.

### **EAN-13 with Code 128 Supplemental**

- Check digit must be included in label data and is assumed to be correct
- Supplemental data is appended to base label
- Prefix must be an ASCII character 'F'- total length including prefix must be greater or equal to 20 (code 128 Supplemental codes are variable length having a minimum of 2 data characters)
- Characters immediately following base label must be of the form '8100', '8101' or '8102'
- Example: 'F11012345678918100000951'

### **Code 39**

- Check character must be included in label data.
- Label length including start, stop and check characters and excluding prefix character must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Start and stop characters "\*" must be included in label.
- Prefix must be an ASCII character '\*'.
- Example : '\*\*Code 39.TEST\*'.

### **Code 39-Pharmacode**

- Check character must be included in label data.
- Label length including start, stop and check characters and excluding prefix character must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Start and stop characters "\*" must be included in label.
- Prefix must be an ASCII character 'p'.
- Example: 'p\*123456789\*'.

### **I 2 of 5**

- Check character must be included in label data.
- Label length including check characters and excluding prefix character must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Prefix must be an ASCII character 'i'.
- Example: 'i0123456789'.

---

## Codabar

- Check character must be included in label data.
- Label length including check character and excluding prefix character must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Prefix must be an ASCII character '%'.  
[Prefix Character](#)
- Start stop character sets must meet the matching requirement set forth by the scanner configuration item *Start/Stop Character Match*.
- Start stop character sets must be of the form ABCD/ABCD and must be included in the label.
- Example: '%s\$99.95s' (the lower case 's' at each end of the example is a placeholder for the start stop character set).

## Code 128

- Prefix must be an ASCII character '#'.  
[Prefix Character](#)
- Label length excluding prefix character or function code 3 for Code 128 programming labels must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Function characters may be transmitted as a hexadecimal value 8x. Where x correlates to function characters 1 thru 4 as follows:
  - x80 = function code 1
  - x81 = function code 2
  - x82 = function code 3
  - x83 = function code 4
- For Code 128 programming labels the format is of the general form '#/82nnnnn/r' - /82 is hexadecimal 82 and /r is carriage return.
- Example: '#Code\_128.Test'.

---

## MSI

- Check character must be included in label data.
- Label length including check character and excluding prefix character must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Prefix must be an ASCII character '@'.
- Example: '@144769254'.

## Code 93

- Prefix must be an ASCII character '&'.
- Label length excluding prefix character must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Example: '&Code93-test'.

## PDF417

- Prefix must be an ASCII character 'P'.
- Label length excluding prefix character cannot exceed 300 characters. In addition to this, label length excluding prefix character must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.

---

## AIM Formats

AIM specifies a 3-character string that is attached as a prefix to the label data for transmission. Because AIM specifies one identifier for UPC-A, UPC-E and EAN-13 labels, UPC-A, UPC-E and EAN-13 will be received from the handheld and transmitted by the scanner as EAN-13. The 'J' character must be the first character received in the label transmission from the handheld.

The following sections describe the prefix strings and identify what specific label characteristics can be supported.

### UPC-A

- AIM does not specify UPC-A as a separate symbology using this transmission format - labels will be transmitted as EAN-13.
- Example: 'JE00060992011187'.

### UPC-E

- AIM does not specify UPC-E as a separate symbology using this transmission format - labels will be transmitted as EAN-13.
- Example: 'JE00000000998875'.

### EAN-13

- Check digit must be included in label data and is assumed to be correct.
- Prefix must be ASCII characters 'JE0' - total length including prefix must be 16.
- Example: 'JE01101234567891'.

### EAN-8

- Check digit must be included in label data and is assumed to be correct.
- Prefix must be ASCII characters 'JE4' - total length including prefix must be 11.
- Example: 'JE400210126'.

### 2-Digit Supplemental

- Supplemental data is appended to any EAN base label.
- Prefix must be ASCII characters 'JE1'.
- length of Supplemental data including prefix must be 5. Total required length is 21 for EAN-13 and 16 for EAN-8.
- Examples: addon portion is highlighted data is underlined.

UPC-A 2-Digit addon	'JE00060992011187JE1 <u>12</u> '
UPC-E 2-Digit addon	'JE00000000998875JE1 <u>12</u> '
EAN-8 2-Digit addon	'JE400210126JE1 <u>12</u> '
EAN-13 2-Digit addon	'JE01101234567891JE1 <u>12</u> '

---

## 5-Digit Supplemental

- Supplemental data is appended to any EAN base label.
- Prefix must be ASCII characters 'JE2'.
- Length of supplemental data including prefix must be 8. Total required length is 24 for EAN-13 and 19 for EAN-8.
- Examples: addon portion is highlighted data is underlined.

UPC-A 5-Digit addon	'JE00060992011187JE2 <u>12345</u> '
UPC-E 5-Digit addon	'JE00000000998875JE2 <u>12345</u> '
EAN-8 5-Digit addon	'JE400210126JE2 <u>12345</u> '
EAN-13 5-Digit addon	'JE01101234567891JE2 <u>12345</u> '

---

## Code 128 Supplemental

- Supplemental data is appended to any EAN base label.
- Prefix must be ASCII characters ']C0'.
- length of Supplemental data including prefix is variable but must be at least 9.
- Examples: addon portion is highlighted data is underlined.

UPC-A Code 128 addon	'E00060992011187] <b>C08100000</b> <u>951</u> '
UPC-E Code 128 addon	'E00000000998875] <b>C08100000</b> <u>951</u> '
EAN-8 Code 128 addon	'E400210126] <b>C08100000951</b> '
EAN-13 Code 128 addon	'E01101234567891] <b>C08100000</b> <u>951</u> '

## Bookland

- The 'Bookland' / ISBN code will be formatted as a vendor specific AIM label.
- Prefix must be ASCII characters ']X0'.
- length of label data including prefix is 13.
- Examples: ']X01234567890'.

## Code 39

- Check character must be included in label data.
- Label length including start, stop and check characters and excluding prefix characters must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Start and stop characters "\*" must be included in label.
- Prefix must be ASCII characters ']A0' or ']A1'.
- Example: '\*]A0Code 39.TEST\*'

## Codabar

- Check character must be included in label data.
- Label length including check character and excluding prefix characters must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Prefix must be ASCII characters ']F0'.
- Start stop character sets must meet the matching requirement set forth by the scanner configuration item *Start/Stop Character Match*.
- Start stop character sets s must be of the form ABCD/ABCD and must be included in the label.
- Example: ']F0s\$99.95s' (the lower case 's' at each end of the example is a placeholder for the start stop character set).

---

## MSI

- Check character must be included in label data.
- Label length including check character and excluding prefix characters must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Prefix must be ASCII characters ']M0'.
- Example: ']M0144769254'.

## Code 93

- Prefix must be ASCII characters ']G0'.
- Label length excluding prefix characters must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Example : ']G0Code93-test'.

---

## **RSS-14**

- Prefix must be ASCII characters 'je0'.
- Check character must be included in label.
- Label length excluding prefix characters must be 14 characters.
- Example: 'je001044123456789'.

## **RSS Expanded**

- Prefix must be ASCII characters 'je0'.
- Label length excluding prefix characters must be at least 1 character. Maximum length is the maximum label size supported by the scanner.
- Example: 'je001900123456789083103001750'.

## **I 2 of 5**

- Check character must be included in label data.
- Label length including check characters and excluding prefix characters must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Prefix must be an ASCII character 'I1' (other prefixes specify different check character properties which are not supported).
- Example: 'I10123456789'.

---

## Code 128 / EAN128

- Prefix must be either ASCII characters ']C0', ']C1' or ']C2'.
- Label length excluding prefix character must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- If EAN-128 Symbology is Enabled and prefix is ']C1', label will be identified as an EAN128 otherwise it is identified as a Code 128.
- A prefix of ']C0' designates that no function code is present in the 1st or 2nd character position.
- A prefix of ']C2' designates that a function code 1 is present in the 2nd character.
- Example : ']C0Code\_128.Test'.

## PDF417

- Prefix must be an ASCII characters ']L0'.
- Label length excluding prefix character cannot exceed 300 characters. In addition to this, label length excluding prefix character must meet requirements imposed by the main scanner's fixed or variable label length control for this symbology type.
- Example : ']L0pdf\_test\_label'.

## “Unknown” AIM ID (an AIM ID which is not specified above)

If a label is received that does not have an AIM ID as specified above, and the first three label characters qualify as follows...

- The first character is a '['
- The second character is a capital or small letter
- The third character is a digit

...then the label type is set to GENERIC\_DATA and the “unknown” AIM ID is left-appended to the beginning of the label data.

## ASCII Character Set

The table on this page shows a set of ASCII characters and their corresponding Hex Values. The Hex Values in this table are needed for setting symbology specific label identifiers, as well as enabling custom prefix and suffix characters.

ASCII Char.	Hex No.	ASCII Char.	Hex No.	ASCII Char.	Hex No.	ASCII Char.	Hex No.
